

NEW WAVE IT

Don't get lost in the current

BRAND IDENTITY / AUGUST 2026

Technology that keeps business moving.

CONTROLLED EVOLUTION / PRODUCTION SYSTEM

Positioning and voice

The accountable technology partner

New Wave IT keeps South Florida businesses secure, supported, and moving forward. The identity communicates calm control, technical competence, responsiveness, and local accountability.

VOICE PRINCIPLES

- Lead with business outcomes before tools or acronyms.
- Use specific language instead of empty “cutting-edge” claims.
- Explain risk without fear-based selling.
- Sound accountable: what we do, what happens next, and who owns it.
- Local without clichés. Premium without flash. Human without jokes.

MESSAGE HIERARCHY

PRIMARY PROMISE

Technology that keeps business moving.

HERITAGE LINE

Don't get lost in the current

SERVICE STATEMENT

Managed IT, cybersecurity, cloud, and support built around the way your business actually works.

Logo family

PRIMARY HORIZONTAL

WITH HERITAGE LINE

Use the complete lockup only when the wordmark remains readable. At small sizes, move to the standalone current mark or wordmark. The two-stroke micro mark is reserved for 24 pixels and below.

STACKED

STANDALONE CURRENT

NEW WAVE IT

Don't get lost in the current

REVERSED

Construction, clear space, and minimum size

64 × 64 MASTER / 48 × 48 OPTICAL FIELD

Use the mark with room to breathe.

- Keep 1× clear space around the standalone icon.
- Keep 1.5× around complete logo lockups.
- Minimum digital width: 140 px without the heritage line.
- Minimum digital width: 220 px with the heritage line.
- Never stretch, rotate, glow, shadow, recolor individual waves, or place the mark inside a shield.

MICRO OPTICAL VARIANT

Two strokes only. Use at 16–24 px.
Never enlarge it into a primary logo.

Color system

Signal Cyan is the primary action color. Continuity Green signals success, uptime, protection, or completion—not a competing call to action. White normal-size text is not approved directly on Cyan or Green; use Current Navy text on those fills.

Typography

Plus Jakarta Sans

Technology that keeps business moving.

Inter

Use Inter for paragraphs, forms, legal text, tables, captions, and operational communication. It should feel open, direct, and easy to scan.

IBM PLEX MONO / TICKET 2841 / 14:32 EST

Calm control is part of the service.

TYPE ROLES

- Display — headlines, navigation, CTAs
- Body — paragraphs, forms, documents
- Technical — metadata and status labels
- Editorial — rare pull quotes only

Graphic language

CURRENT FIELD / HIGH-IMPACT DARK

TECHNICAL GRID / LIGHT

Flowing current lines create movement and continuity. Technical grids communicate visibility and organization. Small status rings and signal points support meaning; they are not decorative noise.

Layout, motion, and accessibility

Layout rhythm

- 4 px base unit; 8 px content rhythm
- 12 / 18 / 24 px primary radii
- 1280 px desktop content maximum
- 720–780 px long-form reading width
- 12-column desktop; 4-column mobile
- Pills only for status, filters, and tags

Accessibility first

- WCAG 2.2 AA for intended text sizes
- Current Navy on Cloud White by default
- Cloud White on Current Navy for dark fields
- Do not use Cyan or Green as normal body text
- SVGs require meaningful labels or aria-hidden
- Respect prefers-reduced-motion

MOTION: 180–300 MS STANDARD / 500 MS MAXIMUM ENTRANCE

Website and digital application

SEMANTIC TOKENS

```
--nw-current-navy  
--nw-signal-cyan  
--nw-continuity-green  
--nw-font-display  
--nw-radius-lg
```

The website consumes the same canonical paths and tokens as every distributed asset. Metadata and structured data use first-party logo and Open Graph files rather than external legacy URLs.

Social application and safe areas

Portrait posts keep critical content within the centered 1080 × 1080 profile-grid preview. Story and Reel templates reserve the top 270 px and bottom 384 px for platform interface and calls to action.

Documents, presentations, and print

Editable operational files use the same logo, type hierarchy, current fields, and support language. Print assets include bleed and vector artwork; email assets use conservative table-based HTML.

asset index + build report

One source. One system. No improvised logo files.

Use the asset index to select the right format. Do not rebuild the mark in another application. Archive superseded logo files outside the public web root after the new package is deployed.
